

*“I am a Medical Laboratory Professional.  
My work is crucial to diagnosis,  
treating and curing diseases!”*

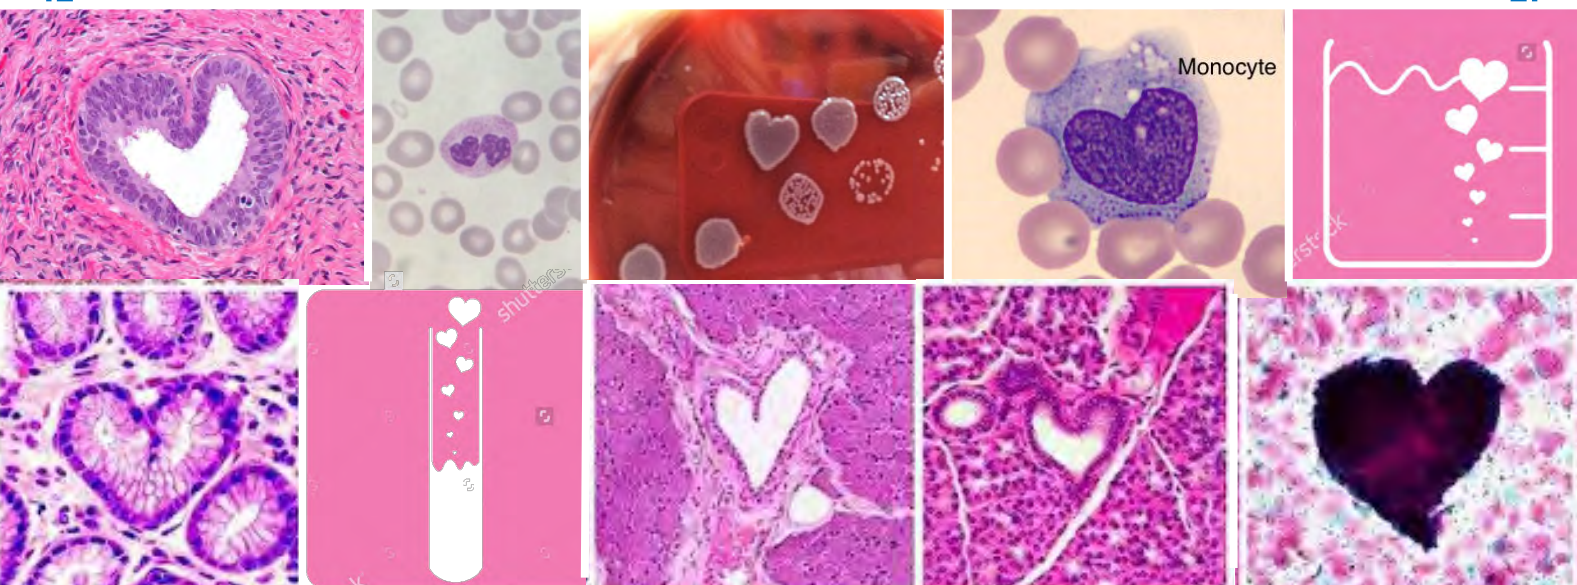

**15 April 2018**

## **INTERNATIONAL BIOMEDICAL LABORATORY SCIENCE DAY**

Medical Laboratory Professional? Maybe it is an unknown profession to some; others, probably don't even know who we are and what we do. This is mainly because we are the team behind the scenes—we see things beyond the capacity of the naked eye, and we know the condition of patients without seeing them.

Medical Technology is a career that is very important to the treatment and diagnosis of patients. Medical Laboratory Professionals (MLPs) are the individuals who work in a Clinical Laboratory processing various bodily fluids to examine the presence of disease.

We play the essential part as BACKBONE of the Diagnostic Team!
